

ubroadcast Launches LIVE Broadcasting

SAN DIEGO, -- (BUSINESS WIRE) – May 7, 2007 - ubroadcast, Inc. (www.ubroadcast.com) today announced that it has officially released its much anticipated “Station Manager” software which allows users to host a LIVE Internet talk radio or music show.

Pre-Registered broadcasters have been testing and providing feedback on the software which has led to several improvements over the past few weeks.

The Patent Applied for Technology in the Station Manger software allows the user to broadcast LIVE at any time to ubroadcast Listeners, as well as upload MP3's and WAV files of music, commercials and other pre-recorded content that plays on their ubroadcast station 24 hours. Several enhanced features will soon be released to provide a full interactive experience between broadcaster and listener unlike anything else currently available in traditional or Internet Radio.

In addition to the LIVE and uncensored user generated content (which is not subject to FCC restrictions), ubroadcast also offers HD quality music and other premium content stations which the company hopes will make it a superior offering to Satellite radio providers such as XM (NASDAQ: XMSR) and Sirius (NASDAQ:SIRI).

The Company has experienced a great deal of exposure for its potential for growth in popularity such as other companies like MySpace (A Google Company (NASDAQ:GOOG) have experienced, and has been called “Radio’s YouTube” (A NewsCorp. Company (NYSE:NWS) in recent articles.

ubroadcast’s “Player” software, which allows Listeners to hear user generated broadcasts and other content, was launched last year and is available as a free download on the ubroadcast.com web site.

The Company encourages interested individuals to try the ubroadcast Station Manger and Player software which are both currently free downloads.

Please visit www.ubroadcast.com for more information about the company and to download the software.
